***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-32 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Sorensen Pat. No. 4,959,005. See claim 1 of Sorensen '005. Sorensen discloses throttles can vary in the base-wall-section and directing the flow to the sidewall section as shown in Figures 2, 2A, 4 and 6. The sidewall section flow guides (28) extend from a plurality of throttled base-wall-section flow guides (throttle 20, 22). Sorensen discloses the self-aligning of the mold such that the alignment between the first and second mold parts varies along the direction of conduction of the material in the flow guide the self-aligning to open the throttles in the flow guide. Sorensen has radial flow guides (36) in the base-wall section that conduct material into concentric flow guides (40), also, concentric flow throttles are disclosed at col. 6, lines 1-3. Sorensen discloses the throttles being formed by recesses in the opposed first and second mold parts which form the brink and labrum.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wurst et al. (Pat. No. 5,972,256 and 5,639,487), McFarlane (Pat. No. 4,956143), and Cargile (Pat. No. 4,332,545) show mechanical means for adjusting the alignment of mold parts and the determination of the alignment.
